EODSECUR™

Real-Time, Expert,
Remote Mail Threat Support.

RaySecur's team of former military threat experts delivers 24x365 real-time support when and where you need it, avoiding costly shut-downs and supporting emergency response.

EODSecur™ brings the expertise of military-trained Explosive Ordnance Disposal (EOD) technicians with decades of experience directly into your facilities anytime, anywhere. The most difficult time for facility operations comes when decisions must be made without the "right" person in the room. EODSecur brings the technical knowledge into your decision-making process both before a threat presents itself and exactly when you need it, as it unfolds in your facility.

Regardless of whether you already run a full suite of CBRNE equipment, have only visual or tactile screening in place, or need advice on how to structure your mail screening program, RaySecur™ can help.
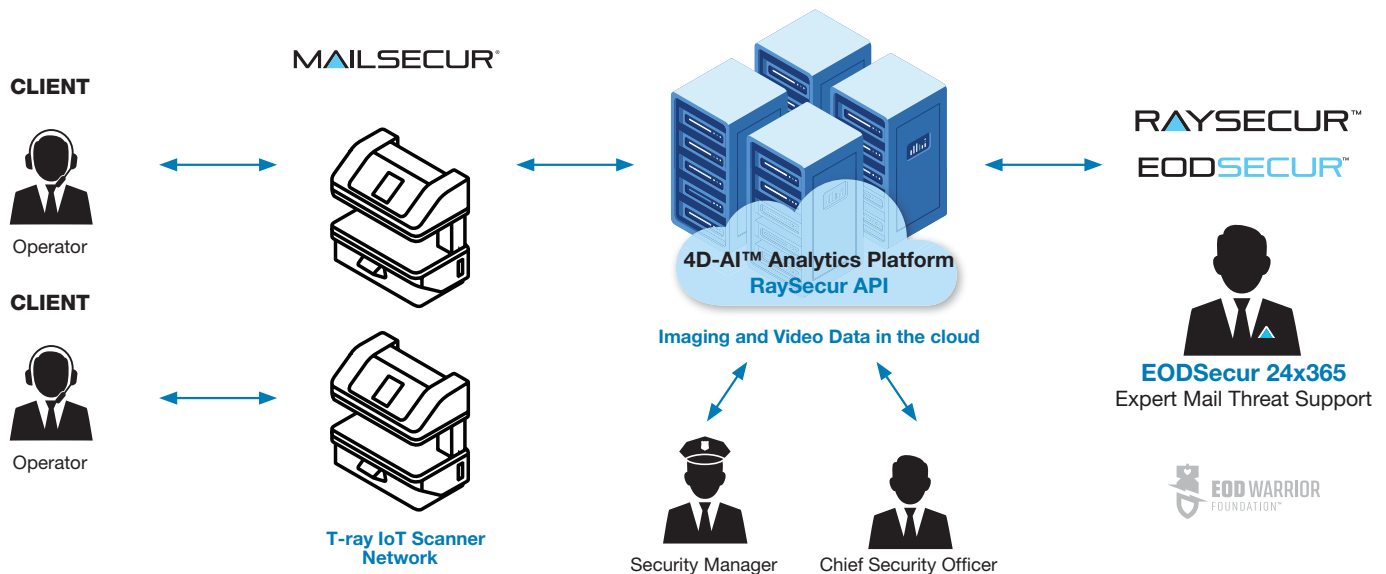

Real-Time Expert Support
The 24x365 remote support eliminates the need to maintain highly-trained technical experts on your staff for only those occasions when their expertise is needed. Any time a suspicious item is identified, or your staff needs additional expert support, our EODSecur team is only a call away.

All of our MailSecur® scanners support remote login enabling our EOD team to remotely assess threats as if they are on site working alongside your staff. For locations without MailSecur Scanners, EODSecur technicians are available to provide expert second opinions and threat assessments based on the information available from your staff or from the MailSecur Connect™ app.

Decades of Experience

RaySecur's expert Explosive Ordnance Disposal (EOD) technicians honed their skills within the Department of Defense, focused on the identification, categorization, mitigation and reduction of all methods of threats. They have decades of experience in mitigating hazards in high security and particularly sensitive venues, and they pass that experience onto our clients. Our technicians continuously stay current on emerging threats helping our clients to focus on those most likely to impact their operations. This deep expertise allows us to provide timely and relevant assessments, delivering critical information to protect our clients from traditional, emerging, and ever-changing threats facing security teams everywhere. RaySecur is proud to collaborate with the EOD Warrior Foundation as it employs service- related disabled EOD technicians within our program. The EOD Warrior Foundation gives back to those who gave so much protecting the lives of others around the world. This program allows veterans, injured while serving, the opportunity to apply their valuable expertise to remotely assist RaySecur's clients.
